1 Prognostic Module – User Guide

The prognostic module allows users to calculate risk predictions for individual patients using trained machine learning models, retrain models on the current database, and inspect information about all available models.

The complete Czech version of the manual is available in the `README.md` file on GitHub[1].

1.1 Calculating a Prediction

1. Navigate to the *Patient List* section.
2. Select the patient for whom you want to calculate a prognostic score.
3. Click the head-with-gear icon in the upper right corner (Figure 1).

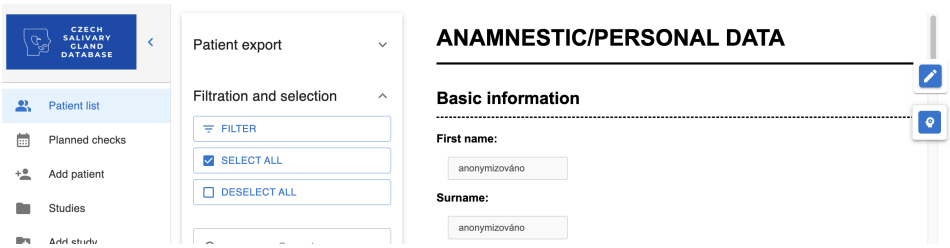

Figure 1: Opening the prognostic module for a patient.

4. Select the type of prediction you want to calculate (Figure 2).

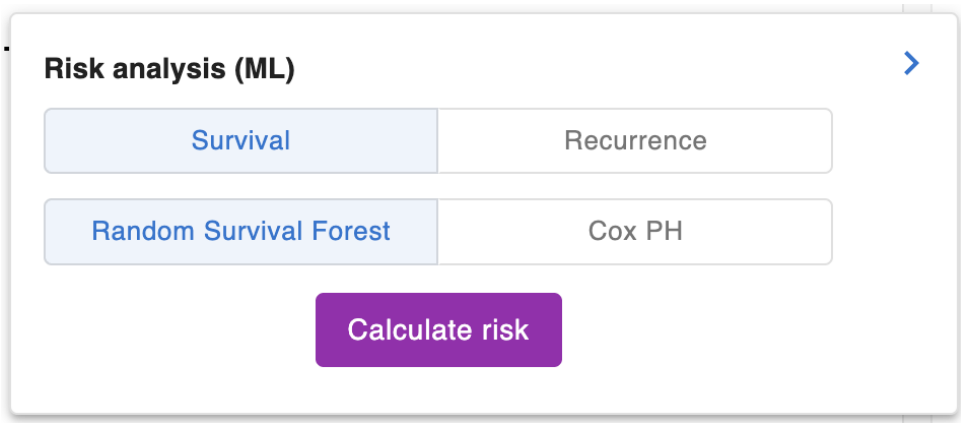

Figure 2: Selecting the prediction type.

5. Click the *Calculate risk* button.
6. The calculation will run and the result will be displayed (Figure 3).

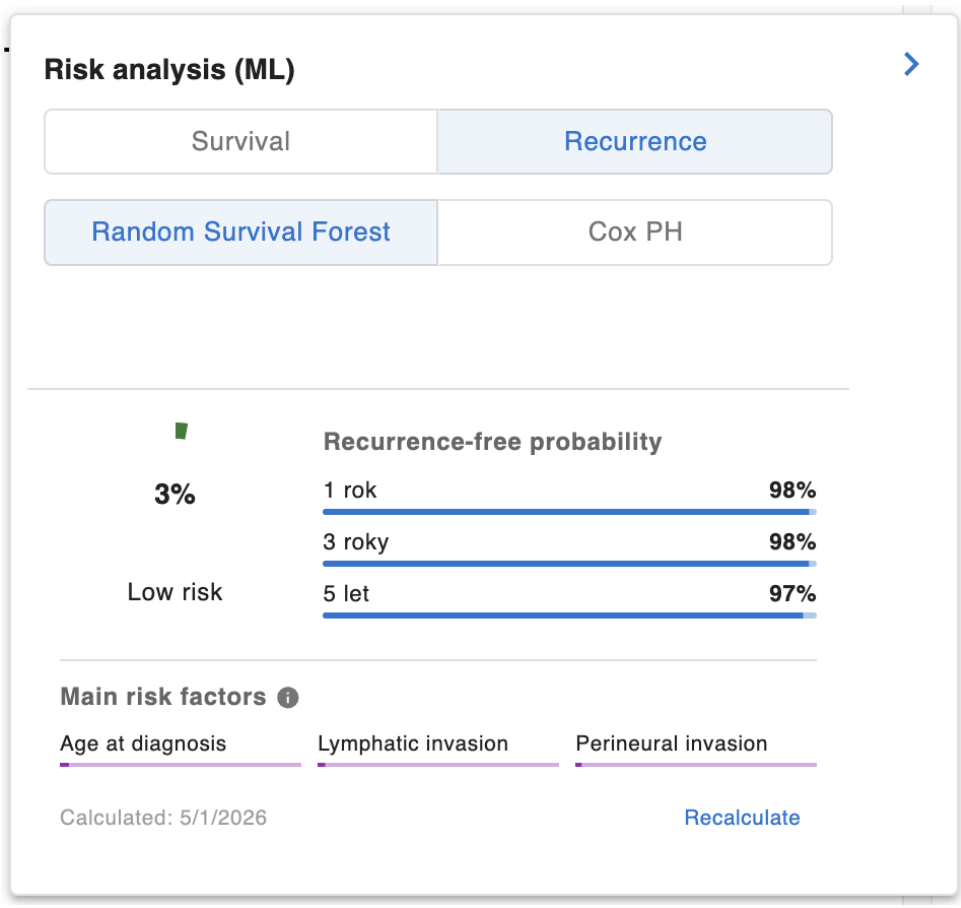

Figure 3: Prediction result.

1.2 Training a Model

1. Navigate to the *Risk Prediction (ML)* section.
2. Select which model you want to train (Figure 4).

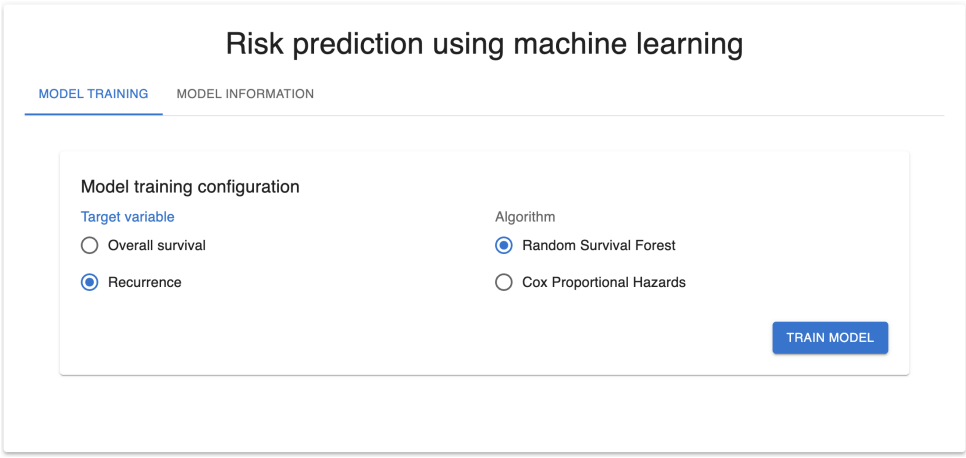

Figure 4: Selecting a model for training.

3. Start the training by clicking the *TRAIN MODEL* button.

4. Once training is complete, the training result is displayed (Figure 5).

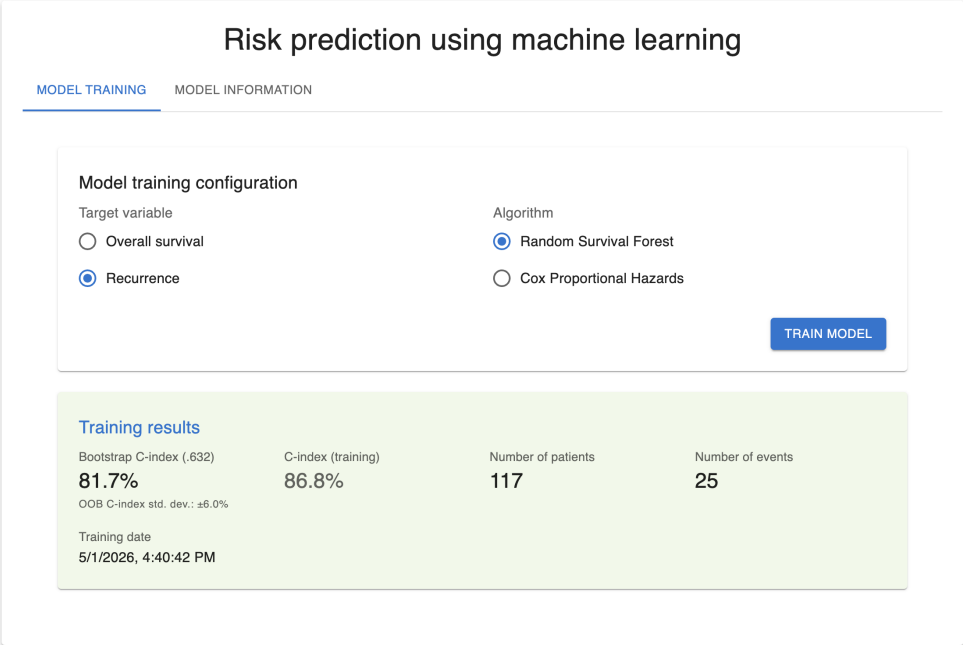

Figure 5: Training result after completion.

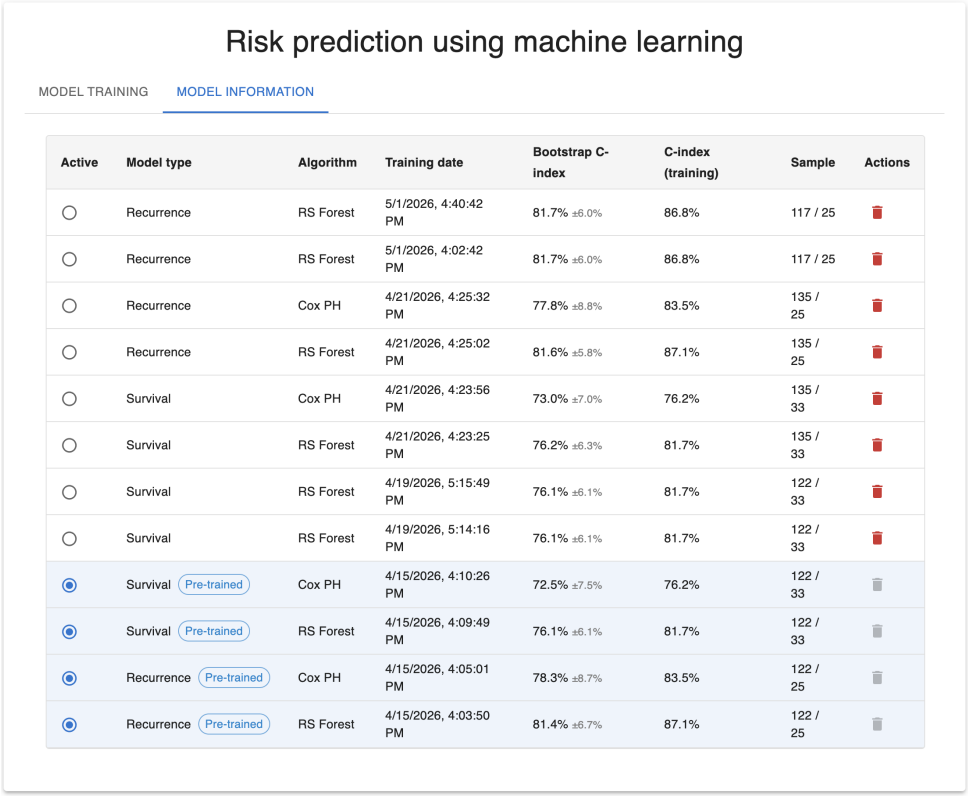
1.3 Model Information

1. Navigate to the *Risk Prediction (ML)* section.
2. Switch to the *Model Information* tab (Figure 6).



Risk prediction using machine learning

MODEL TRAINING | MODEL INFORMATION

Active	Model type	Algorithm	Training date	Bootstrap C-index	C-index (training)	Sample	Actions
○	Recurrence	RS Forest	5/1/2026, 4:40:42 PM	81.7% ±6.0%	86.8%	117 / 25	
○	Recurrence	RS Forest	5/1/2026, 4:02:42 PM	81.7% ±6.0%	86.8%	117 / 25	
○	Recurrence	Cox PH	4/21/2026, 4:25:32 PM	77.8% ±8.8%	83.5%	135 / 25	
○	Recurrence	RS Forest	4/21/2026, 4:25:02 PM	81.6% ±5.8%	87.1%	135 / 25	
○	Survival	Cox PH	4/21/2026, 4:23:56 PM	73.0% ±7.0%	76.2%	135 / 33	
○	Survival	RS Forest	4/21/2026, 4:23:25 PM	76.2% ±6.3%	81.7%	135 / 33	
○	Survival	RS Forest	4/19/2026, 5:15:49 PM	76.1% ±6.1%	81.7%	122 / 33	
○	Survival	RS Forest	4/19/2026, 5:14:16 PM	76.1% ±6.1%	81.7%	122 / 33	
◉	Survival Pre-trained	Cox PH	4/15/2026, 4:10:26 PM	72.5% ±7.5%	76.2%	122 / 33	
◉	Survival Pre-trained	RS Forest	4/15/2026, 4:09:49 PM	76.1% ±6.1%	81.7%	122 / 33	
◉	Recurrence Pre-trained	Cox PH	4/15/2026, 4:05:01 PM	78.3% ±8.7%	83.5%	122 / 25	
◉	Recurrence Pre-trained	RS Forest	4/15/2026, 4:03:50 PM	81.4% ±6.7%	87.1%	122 / 25	

Figure 6: Model information tab showing all trained and active models.

3. A list of all trained and currently active models is shown here.
4. You can select the active model and also delete not active models.
